

Ollie:

3-Legged Collie

“Here is a photo of our 11 year old border collie cross, Ollie. In April 2007 we discovered a small lump on his leg which turned out to be an aggressive tumour on the cartilage. Without the amputation he was given 5 weeks to live.

While at Crufts I discovered “Mobile Bones” and started Ollie on it straight away. Within just a few days the difference was great. He is now very active and not showing any lameness, and he is full of humour and mischief”. Elizabeth Vickery
